

UNIT 1: Algorithms & Flowcharts

1. What is an algorithm? Explain the algorithm development method with an example.
 2. Write an algorithm and draw a flowchart to find the largest of three numbers.
 3. Explain different flowchart symbols (Input/Output, Process, Decision, Start/End) with neat diagrams.
 4. Write an algorithm and flowchart to compute the sum of the first N natural numbers.
 5. Explain Looping and Control Flow statements used in algorithms with examples.
-

UNIT 2: Overview of C

1. Explain the history, importance, and features of the C programming language.
 2. Describe the basic structure of a C program with an example.
 3. Explain the compilation process in C (Source program → Object program → Executable).
 4. Define C tokens. Explain keywords, identifiers, constants, and variables with examples.
 5. Explain different data types in C and how variables are declared and initialized.
-

UNIT 3: Operators & Expressions

1. Explain different types of operators in C (Arithmetic, Relational, Logical, Assignment, Bitwise, Conditional).
 2. Explain operator precedence and associativity with examples.
 3. Describe increment and decrement operators with examples.
 4. Explain type conversion in expressions with examples (implicit and explicit).
 5. Explain formatted input/output functions (scanf, printf) with examples.
-

UNIT 4: Decision Making & Looping

1. Explain different types of IF statements (Simple IF, IF-ELSE, Nested IF, ELSE-IF ladder).
 2. Explain the switch statement with an example. Compare it with the ELSE-IF ladder.
 3. Explain While, Do-While, and For loops with examples.
 4. Describe break, continue, and goto statements with examples.
-

UNIT 5: Arrays & Strings

1. What is an array? Explain declaration, initialization, and accessing of 1-D arrays.
2. Explain 2-D arrays (multidimensional arrays) with memory representation.
3. What is a string? Explain how to declare, read, and display strings in C.
4. Explain string handling functions: strcpy, strcmp, strlen, strcat with examples.
5. What is a table of strings? Write an example program to store and print multiple strings.
