

B.Sc. (CA & IT):II

Multi-Media Animation(MA)

Note: All students are informed that the **submission date is 06/03/2026**. Late submissions will **not be accepted under any circumstances**. Students must also be **prepared for the viva** at the time of submission. Kindly complete your work on time and follow the instructions carefully.

UNIT:3

1.What is CorelDRAW? Discuss the features of CorelDRAW in details.

CorelDRAW is a computer program used for **drawing and designing pictures, logos, posters, cards, and banners**. It is made by the company Corel.

CorelDRAW is a **vector graphics software**, which means designs can be made bigger or smaller without losing quality. That is why it is mostly used by graphic designers, printing shops, and students.

Features of CorelDRAW (Easy Language)

1. Drawing Tools

- Helps to draw shapes, lines, and curves.
- You can make circles, rectangles, stars, etc.
- Useful for making logos and designs.

2. Easy to Use

- Simple interface.
- Tools are easy to find.
- Good for beginners and students.

3. Color Filling

- You can fill colors in shapes.
- Many color options available.
- Can also use gradient colors (two colors mixed).

4. Text Tools

- You can write text anywhere in design.
- Change font, size, color, and style.
- Can make stylish text for posters.

5. Image Editing

- Insert photos in your design.
- Crop, resize, and adjust brightness.
- Convert photo into drawing style.

6. Effects

- Add shadow, transparency, and 3D effects.
- Makes design more attractive.

7. Layers

- Helps to manage many objects easily.
- You can lock or hide objects.

8. Save and Export

- Save design in different formats (JPG, PNG, PDF).
- Useful for printing and sharing.

2. Describe the CorelDRAW screen interface (workspace) with figure.

The **CorelDRAW workspace** is the screen you see when you open the software. It contains different parts (tools and panels) that help you create and edit designs easily.

Parts of CorelDRAW Workspace

1. Title Bar

- Shows the name of the software and current file.
- Located at the top of the window.

2. Menu Bar

- Contains menus like File, Edit, View, Layout, Arrange, Effects, Bitmaps, Text, Tools, Window, Help.
- Used to access all commands.

3. Standard Toolbar

- Contains shortcut buttons like New, Open, Save, Print, Cut, Copy, Paste, Undo, Redo.

4. Property Bar

- Changes according to the selected tool or object.
- Shows options for editing shapes, text, colors, etc.

5. Toolbox

- Located on the left side.
- Contains drawing tools like Pick Tool, Shape Tool, Rectangle Tool, Ellipse Tool, Text Tool, Fill Tool, etc.

6. Drawing Page (Work Area)

- The white page in the center where you create your design.
- Also called the printable area.

7. Color Palette

- Located on the right side.
- Used to apply colors to objects quickly.

8. Dockers (Panels)

- Panels on the right side for extra settings like Object Properties, Layers, Alignment, etc.

9. Status Bar

- Located at the bottom.
- Shows information about selected object (size, position, color).

10. Scroll Bars

- Used to move the page up, down, left, and right.

3.Elaborate the any seven CorelDRAW tools with their use.

CorelDRAW (developed by Corel) provides many tools for drawing and editing designs.

1. Pick Tool

Use:

- Used to select objects.
- Move, resize, rotate, and delete objects.
- This is the most commonly used tool.

2. Shape Tool

Use:

- Used to change the shape of objects.
- Adjust nodes and curves.
- Helpful for editing lines and shapes.

3. Rectangle Tool

Use:

- Used to draw rectangles and squares.
- Useful for making boxes, banners, and layouts.

4. Ellipse Tool

Use:

- Used to draw circles and oval shapes.
- Press Ctrl while dragging to draw a perfect circle.

5. Text Tool

Use:

- Used to type text in the design.
- Change font, size, color, and style.
- Useful for posters, cards, and headings.

6. Freehand Tool

Use:

- Used to draw free lines like drawing with a pencil.
- Helpful for sketching and custom shapes.

7. Fill Tool

Use:

- Used to fill color inside objects.
- Apply solid color, gradient, or patterns.
- Makes designs attractive.

4. Discuss the CorelDRAW menu bar in brief.

The **Menu Bar** in CorelDRAW is located at the top of the screen. It contains different menus that provide all commands needed to create and edit designs.

Main Menus in CorelDRAW

1. File Menu

- Used for file operations.
- Options: New, Open, Save, Save As, Import, Export, Print, Close.

2. Edit Menu

- Used for editing objects.
- Options: Undo, Redo, Cut, Copy, Paste, Delete, Select All.

3. View Menu

- Controls how the design appears on screen.
- Options: Zoom, Full Screen, Grid, Rulers, Guidelines.

4. Layout Menu

- Used for page settings.
- Options: Page Setup, Insert Page, Delete Page, Page Size.

5. Arrange Menu

- Used to arrange objects.
- Options: Align, Order (Bring to Front/Send to Back), Group, Ungroup, Rotate.

6. Effects Menu

- Used to apply special effects.
- Options: Shadow, Contour, Blend, Transparency, Distort.

7. Bitmaps Menu

- Used for editing images (photos).
- Options: Convert to Bitmap, Crop, Adjust Color, Filters.

8. Text Menu

- Used for text formatting.
- Options: Font, Size, Alignment, Fit Text to Path.

9. Tools Menu

- Used for settings and options.
- Options: Customize, Color Management, Options.

10. Window Menu

- Used to manage windows and toolbars.

11. Help Menu

- Provides help and information about the software.

5.Explain the any three Dockers in details

In **CorelDRAW** (developed by Corel), **Dockers** are panels that provide extra options and settings to manage and edit designs easily. They usually appear on the right side of the workspace.

1. Object Properties Docker

Use:

- Shows properties of the selected object.
- Change fill color, outline, transparency, and effects.
- Edit size, position, and shape details.

Importance:

Helps to quickly modify the appearance of any object without using many tools.

2. Object Manager (Layers) Docker

Use:

- Shows all objects and layers in the design.
- Rename, hide, lock, or delete objects.
- Arrange objects in order (front or back).

Importance:

Very useful for managing complex designs with many objects.

3. Align and Distribute Docker

Use:

- Align objects left, right, center, top, or bottom.
- Distribute equal space between objects.

Importance:

Helps to arrange objects neatly and professionally.

UNIT:4

1. Elaborate the Dashboard of Canva Platform in brief.

The **Canva Dashboard** is the main screen you see after logging into Canva. It helps users quickly create designs, open previous projects, and access tools. Canva is an online graphic design platform used for making posters, presentations, social media posts, logos, and more.

Main Parts of Canva Dashboard

1. Top Menu Bar

- Contains options like Home, Projects, Templates, Brand, Apps.
- Search bar to find templates and designs quickly.

2. Create a Design Button

- Used to start a new design.
- Choose size (Instagram post, Presentation, Poster, etc.).

3. Templates Section

- Shows ready-made design templates.
- Users can select and edit templates easily.

4. Recent Designs

- Displays designs you worked on recently.
- Click to open and continue editing.

5. Projects Section

- Stores all your designs, folders, and uploads.

6. Left Sidebar Menu

- Options like Home, Projects, Templates, Brand Kit, Apps, Trash.
- Helps to navigate different features.

7. Account/Profile Section

- Shows user profile, settings, and logout option.

2. Discuss the features of Canva platform in details.

Canva is an online graphic design platform used to create posters, presentations, social media posts, logos, videos, and many other designs easily. It is popular among students, teachers, and professionals because it is simple to use.

Main Features of Canva

1. Easy Drag-and-Drop Interface

- Users can drag images, text, and elements into the design.
- No advanced design skills required.
- Beginner-friendly platform.

2. Thousands of Ready-Made Templates

- Templates for posters, resumes, presentations, social media, invitations, etc.
- Saves time in designing from scratch.

3. Text and Font Options

- Many fonts and text styles available.
- Change size, color, alignment, spacing.
- Add effects like shadow, outline, curve.

4. Photos, Icons, and Elements Library

- Large collection of images, shapes, stickers, and icons.
- Both free and paid elements available.

5. Backgrounds and Colors

- Many background designs and color combinations.
- Gradient and pattern backgrounds available.

6. Photo Editing Tools

- Crop, resize, rotate images.
- Adjust brightness, contrast, saturation.
- Apply filters and effects.

7. Video and Animation Features

- Create short videos and animated designs.
- Add transitions and motion effects.

8. Collaboration Feature

- Multiple users can work on the same design.
- Useful for group projects.

9. Download and Sharing Options

- Download designs in JPG, PNG, PDF, MP4 formats.
- Share directly on social media or via link.

10. Cloud Storage

- Designs are saved online automatically.
- Access from any device with internet.

3. Explain the different elements of Canva.

Canva provides many **elements** that help users create attractive designs easily. Elements are ready-made items that you can add to your design.

Types of Elements in Canva

1. Shapes

- Basic shapes like rectangle, circle, triangle, square, arrows.
- Used for backgrounds, boxes, and design layouts.

2. Lines and Frames

- Different styles of lines (straight, curved, dotted).
- Frames are used to place photos inside shapes.

3. Icons

- Small symbols representing objects or ideas.
- Useful for presentations and posters.

4. Stickers

- Fun and decorative graphics.
- Often used in social media posts and invitations.

5. Photos

- Large collection of free and paid images.
- Can be used as background or main image.

6. Videos

- Short video clips available in the library.
- Useful for video designs and presentations.

7. Audio (Music & Sound)

- Background music and sound effects.
- Used in video projects.

8. Charts and Graphs

- Bar charts, pie charts, line graphs.
- Useful for showing data visually.

9. Illustrations

- Creative drawings and artwork.
- Makes design more attractive.

4. Discuss the Canva AI -Magic Studio Features in brief.

Canva **Magic Studio** is a set of AI-powered tools that help users create and edit designs automatically using simple text instructions. It makes designing faster and easier.

Main Features:

1. **Magic Design** — Automatically creates presentations, posters, and social media posts from a description.
2. **Magic Write** — Generates text, captions, and content using AI.
3. **Magic Edit** — Allows editing images by adding, removing, or changing objects.
4. **Magic Expand** — Extends images to fit required size.
5. **Background Remover** — Removes image background instantly.
6. **Magic Media** — Creates images and videos from text prompts.
7. **Magic Switch** — Converts designs into different formats or languages.

Conclusion:

Magic Studio helps beginners and students create professional designs quickly without advanced skills.

5. Explain the different features of video editing software.

Features of Video Editing Software

Video editing software is used to create, edit, and improve videos for movies, YouTube, education, and social media. It helps users combine video clips, audio, text, and effects into one final video.

Main Features

1. Video Cutting and Trimming

- Cut unwanted parts of a video.
- Trim clips to the required length.

2. Joining and Splitting Clips

- Combine multiple video clips into one.
- Split a video into different parts.

3. Transitions

- Add smooth effects between two clips (fade, dissolve, slide).
- Makes video look professional.

4. Text and Titles

- Add titles, captions, and subtitles.
- Change font, size, color, and style.

5. Audio Editing

- Add background music and sound effects.
- Adjust volume, remove noise, or record voice.

6. Visual Effects and Filters

- Change brightness, contrast, and color.
- Apply filters to improve video quality.

7. Speed Control

- Slow motion or fast motion effects.
- Useful for action scenes or demonstrations.

8. Animation and Motion Effects

- Move text or objects in the video.
- Zoom in/out and pan effects.

9. Export and Sharing Options

- Save video in different formats (MP4, AVI, MOV).
- Share directly to social media or YouTube.

10. Multi-Layer Editing

- Work with multiple video, audio, and text layers.
- Useful for complex projects.

6. What is multimedia? Discuss any four elements of multimedia.

Multimedia is the combination of different types of media used together to present information in an attractive way using a computer. It includes text, images, sound, video, and animation. Multimedia is used in education, entertainment, websites, games, and presentations.

Elements of Multimedia

1. Text

- Words and numbers used to present information.
- Used for titles, headings, and descriptions.

2. Images (Graphics)

- Pictures, drawings, photographs, charts.
- Makes content attractive and easy to understand.

3. Audio

- Sound, music, speech, and sound effects.
- Improves user experience and understanding.

4. Video

- Moving pictures with sound.
- Used in movies, tutorials, advertisements.

5. Animation

- Moving graphics or drawings.
- Used in cartoons, games, and presentations.

6. Interactivity

- Allows users to control the content.
- Example: clicking buttons, links, menus.

7. Hyperlinks

- Links that connect one page to another.
- Commonly used in websites for navigation.

UNIT:5

1.Explain various formats of Image and Audio.

Different file formats are used to store images and audio on a computer. Each format has its own features, quality, and file size.

Image File Formats

1. JPEG (JPG)

- Most common image format.
- Small file size with good quality.
- Used for photos and web images.

2. PNG (Portable Network Graphics)

- High-quality image format.
- Supports transparent background.
- Used for logos and web graphics.

3. GIF (Graphics Interchange Format)

- Supports animation (moving images).
- Limited colors.
- Used for small animations on websites.

4. BMP (Bitmap)

- High-quality image format.
- Large file size.
- Used in Windows applications.

5. TIFF (Tagged Image File Format)

- Very high-quality images.
- Used in printing and publishing.

Audio File Formats

1. MP3

- Most popular audio format.
- Small file size with good sound quality.
- Used for songs and music.

2. WAV

- High-quality audio format.
- Large file size.
- Used in professional audio editing.

3. AAC (Advanced Audio Coding)

- Better quality than MP3 at same size.
- Used in mobile devices and streaming.

4. WMA (Windows Media Audio)

- Developed by Microsoft.
- Used in Windows systems.

5. MIDI (Musical Instrument Digital Interface)

- Contains musical instructions, not actual sound.

- Very small file size.
- Used in electronic music and games.

2. Describe the Animation package toolbox in details.

An **Animation Package Toolbox** is a collection of tools used in animation software to create and edit drawings, shapes, colors, text, and motion. It helps users design animated pictures and scenes easily.

Main Tools in Animation Package Toolbox

1. Selection Tool

- Used to select objects or images.
- Move, resize, rotate, or delete objects.

2. Drawing Tools

- Pencil, Brush, Line, and Shape tools.
- Used to draw characters, objects, and backgrounds.

3. Paint/Fill Tool

- Used to fill color inside shapes.
- Apply solid colors, gradients, or patterns.

4. Eraser Tool

- Removes unwanted parts of drawing.
- Helps in correcting mistakes.

5. Text Tool

- Used to add text in animation.
- Change font, size, and color.

6. Zoom Tool

- Zoom in to see details.
- Zoom out to view full scene.

7. Transform Tool

- Resize, rotate, flip, or distort objects.
- Useful for adjusting animation elements.

8. Timeline Tool

- Controls frames and sequence of animation.
- Sets speed and duration of movement.

9. Layers Tool

- Organizes objects in different layers.
- Makes editing easier without affecting other parts.

3. What is multimedia? Discuss any two elements of multimedia.

Multimedia is the combination of different types of media used together to present information through a computer in an attractive way. It includes text, images, sound, video, and animation. Multimedia is used in education, entertainment, presentations, websites, and games.

Any Two Elements of Multimedia

1. Text

- Basic element of multimedia.
- Includes words, numbers, and symbols.
- Used for titles, headings, and information.

2. Audio (Sound)

- Includes music, speech, and sound effects.
- Makes content more interesting and easy to understand.
- Used in videos, games, and presentations.

4. Discuss the panel and their functionality in Animation tool.

In animation software, **panels** are special sections of the screen that provide controls and settings to create and manage animation easily. They help users organize drawings, colors, frames, and properties.

Important Panels in Animation Tool

1. Tools Panel

- Contains drawing and editing tools (brush, pencil, eraser, shapes).
- Used to create and modify objects.

2. Timeline Panel

- Shows frames and sequence of animation.
- Controls timing, speed, and order of movement.

3. Properties Panel

- Displays properties of selected object.
- Change size, position, color, and effects.

4. Layers Panel

- Organizes objects into different layers.
- Lock, hide, or arrange layers easily.

5. Color Panel

- Used to select and change colors.
- Apply fill color and outline color.

6. Library Panel

- Stores symbols, images, and reusable objects.
- Helps to reuse elements in animation.

7. Scene/Stage Panel

- Shows the main working area where animation is created.

5. Write steps to show star moving from top to bottom in animation.

Steps to Show Star Moving from Top to Bottom in Animation

Follow these simple steps in animation software (like Flash/Animate or any animation tool):

1. Create a New Animation File

- Open the animation software.
- Select **New File**.

2. Draw a Star

- Select the **Star/Shape Tool**.
- Draw a star at the **top of the stage (screen)**.

3. Convert to Symbol (if required)

- Select the star.
- Convert it into a symbol/object for animation.

4. Insert Frames in Timeline

- Go to the **Timeline Panel**.
- Insert frames (for example up to 30 or 60 frames).

5. Create Motion Tween

- Apply **Motion Tween** (animation effect for movement).

6. Move Star to Bottom

- Go to the last frame.
- Drag the star from the top to the **bottom of the stage**.

7. Play the Animation

- Press **Play/Enter** to see the star moving from top to bottom.

6. Explain various drawing tools of canva.

Canva provides different drawing tools that help users create freehand drawings, shapes, and designs easily. These tools are simple and useful for students and beginners.

Drawing Tools in Canva

1. Draw (Pen/Brush) Tool

- Used for freehand drawing like a pencil.
- Helps to draw lines, sketches, and signatures.

2. Marker Tool

- Draws thick and bold lines.
- Useful for highlighting or coloring areas.

3. Highlighter Tool

- Creates transparent colored strokes.
- Used to highlight text or parts of design.

4. Eraser Tool

- Removes unwanted parts of drawing.
- Helps in correcting mistakes.

5. Shape Tool

- Used to draw shapes like circle, rectangle, triangle, etc.
- Useful for making diagrams and layouts.

6. Line Tool

- Draws straight lines.
- Used for borders, underlines, or connections.

7. Color Picker

- Select and change drawing color.
- Choose from many color options.

8. Brush Size Option

- Adjust thickness of drawing lines.
- Thin or thick strokes as needed.

Prof. Kimi Modi
