

# Concept of PowerPoint

## 1. Introduction and Creating a Presentation

Microsoft PowerPoint is a part of the Microsoft Office suite. It is a **presentation software** that helps users create **slideshows** containing text, pictures, charts, tables, audio, video, and animations to communicate information clearly and effectively.

A **presentation** is a collection of individual slides arranged in a sequence to display ideas, reports, or lessons.

### Steps to Create a Presentation:

1. Open **MS PowerPoint** from the Start Menu.
2. Select **Blank Presentation** or choose a **template**.
3. Use the **Home** → **New Slide** option to add new slides.
4. Add content such as **text, images, or charts**.
5. Use **Design tab** to apply a background or theme.
6. Save the presentation using **File** → **Save As** → **.pptx format**.

### Advantages:

- Easy to present information visually.
- Supports multimedia elements (sound, video, animation).
- Can be printed as handouts.

## 2. Formatting a Presentation

Formatting means improving the **appearance** and **readability** of slides. It helps make a presentation attractive and professional.

### Common Formatting Options:

- **Font style and size** – Change font using the **Home tab**.
- **Font color and effects** – Apply bold, italic, underline, or shadow effects.
- **Themes** – Ready-made design templates with matching colors and fonts.
- **Slide background** – Apply solid color, gradient, picture, or texture backgrounds.
- **Alignment and spacing** – Adjust object positions properly.

**Tip:** Use consistent fonts, soft colors, and minimal text for effective presentations.

### 3. Presentation Views

PowerPoint offers various **views** to help create, organize, and deliver presentations efficiently.

| VIEW TYPE         | DESCRIPTION                                                               |
|-------------------|---------------------------------------------------------------------------|
| NORMAL VIEW       | Default view used to create and edit individual slides.                   |
| SLIDE SORTER VIEW | Displays all slides as small thumbnails; used to rearrange slide order.   |
| READING VIEW      | Displays slides as they appear in full-screen without starting slideshow. |
| SLIDE SHOW VIEW   | Runs the full presentation from start to end.                             |
| NOTES PAGE VIEW   | Allows the presenter to add speaker notes below slides for reference.     |

#### Shortcut:

Press **F5** to start slide show from the beginning.

Press **Shift + F5** to start from the current slide.

### 4. Slide Show Setup

Slide Show Setup controls how your presentation appears during a show.

#### Steps to Set Up:

1. Go to **Slide Show** → **Set Up Slide Show**.
2. Choose:
  - *Presented by a Speaker (Full Screen)* — Manual control by presenter.
  - *Browsed by an Individual (Window)* — Self-running mode.
3. Set **slide timings** and **loop options** if needed.

#### Slide Show Tips:

- Use a remote or mouse click to change slides.
- Practice the slideshow before presenting.
- Avoid reading text directly from slides.

### 5. Saving and Printing a Presentation

It's important to save your work regularly.

#### Steps to Save:

1. Click **File** → **Save As**.
2. Select location and enter filename.
3. Choose format **.pptx** (PowerPoint Presentation).

### To Print Slides:

1. Go to **File** → **Print**.
2. Choose printer and print options:
  - Print all slides or selected slides.
  - Print handouts (multiple slides on a page).
  - Print Notes Pages (slide + speaker notes).

## 6. Formatting Slides

Formatting slides enhances the design and layout of the overall presentation.

### Important Slide Formatting Options:

- **Layout:** Choose from title slide, content slide, comparison, etc.
- **Background:** Change color, gradient, or use an image.
- **Header & Footer:** Add date, slide number, or footer text.
- **Design Theme:** Use consistent colors, fonts, and styles throughout the presentation.

### Example:

A slide about “Internet Uses” may include a title, bullet points, and an image with a blue theme.

## 7. Slide Transition and Custom Animation

### Slide Transition

It is the **visual effect** applied when moving from one slide to another during the slideshow.

### Steps:

1. Select slide → Go to **Transitions tab**.
2. Choose transition type (Fade, Push, Split, Wipe, etc.).
3. Set duration and sound if needed.

### Custom Animation

It controls how text or objects appear, move, or disappear within a slide.

### Steps:

1. Select object → Click **Animations tab**.
2. Choose an animation like Appear, Fly In, Zoom, or Spin.
3. Set timing (on click, with previous, after previous).

**Purpose:**

Animations attract attention and make the presentation interactive.

## 8. Inserting Pictures, Charts, and Tables

**Inserting Pictures:**

- Go to **Insert** → **Pictures** → **This Device/Online Pictures**.
- Helps to add relevant images for better visual explanation.

**Inserting Charts:**

- Go to **Insert** → **Chart** → **Choose chart type (Bar, Line, Pie, etc.)**.
- Useful for showing statistical or comparison data.

**Inserting Tables:**

- Go to **Insert** → **Table** → **Select rows and columns**.
- Tables are used to organize data neatly.

## Google Products

### 1. Google Docs

Google Docs is an **online word processor** that allows users to create, edit, and share documents on the internet.

It automatically saves work in **Google Drive**.

**Features:**

- Real-time collaboration (multiple users can edit together).
- Cloud storage — no need for manual saving.
- Add comments, suggestions, and hyperlinks.
- Access anytime, anywhere using Google account.

**Example Use:**

Creating reports, essays, letters, or study notes.

### 2. Google Sheets

Google Sheets is an **online spreadsheet** similar to Microsoft Excel. It is used for **data entry, calculations, and analysis**.

**Features:**

- Supports formulas like SUM, AVERAGE, IF, etc.
- Create charts and graphs for visual data representation.
- Easy collaboration and sharing.
- Real-time updates and automatic saving.

**Example Use:**

Maintaining attendance, marksheets, or budgets.

### 3. Google Slides

Google Slides is an **online presentation tool** like PowerPoint.

**Features:**

- Create and share slides with text, pictures, and videos.
- Apply themes, transitions, and animations.
- Present online or offline.
- Collaborate with others in real-time.

**Example Use:**

Creating classroom presentations or project slides.

### 4. Google Forms

Used for creating **online surveys, quizzes, or feedback forms**.

**Features:**

- Supports multiple question types (MCQ, paragraph, checkbox, etc.).
- Responses automatically collected in Google Sheets.
- Can restrict submissions and show results instantly.

**Example Use:**

Student feedback, online exams, event registration.

### 5. Google Drive

Google Drive is a **cloud storage service** that allows users to store, access, and share files online.

**Features:**

- 15 GB free storage for Gmail users.
- Access files anywhere using the internet.
- Supports all file types (documents, images, videos).

- Share files with specific people or publicly.

**Example Use:**

Backup of assignments, sharing notes and presentations.

## 6. Google Calendar

Google Calendar helps in **time management** by scheduling meetings, reminders, and events.

**Features:**

- Set event dates, times, and notifications.
- Share calendar with others.
- Syncs with email and mobile notifications.

**Example Use:**

Scheduling lectures, exams, and deadlines.

## 7. Google Keep

A **note-taking application** for saving ideas, lists, and reminders.

**Features:**

- Create text, image, and voice notes.
- Add checklists and color labels.
- Syncs automatically across all devices.

**Example Use:**

Daily to-do list, reminders, or storing short notes.

## 8. Google Currents (Now replaced by Spaces)

Google Currents was a **communication and collaboration platform** for organizations. It allowed employees to share ideas, posts, and updates.

**Example Use:**

Internal discussions, announcements, or sharing company news.

## 9. Google Meet

Google Meet is a **video conferencing platform** used for online meetings and virtual classes.

**Features:**

- Supports HD video calls with multiple participants.

- Screen sharing and chat available.
- Integration with Calendar and Gmail.
- Works on mobile and web browsers.

**Example Use:**

Online lectures, interviews, and meetings.

## 10. Google Contacts

Stores all your **contact information** like email, phone number, and address.

**Features:**

- Automatically syncs with Gmail and mobile devices.
- Easy to search, add, and organize contacts.

**Example Use:**

Maintaining email lists or student contact databases.

## 11. Google Groups

Used to create **discussion forums or email-based groups**.

**Features:**

- Create groups for different subjects or teams.
- Members can send group emails and share discussions.

**Example Use:**

Student project groups or departmental announcements.

## 12. Google Classroom

Google Classroom is a **free online learning platform** used by teachers and students.

**Features:**

- Teachers can create and organize assignments.
- Students can submit work online.
- Enables communication between teacher and student.
- Integrates with Google Docs, Drive, and Meet.

**Example Use:**

Conducting online classes, grading assignments, and sharing materials.

## Summary Table

| Tool       | Category        | Key Purpose                 |
|------------|-----------------|-----------------------------|
| PowerPoint | Presentation    | Create visual presentations |
| Docs       | Word Processing | Create and share documents  |
| Sheets     | Spreadsheet     | Perform calculations        |
| Slides     | Presentation    | Make online slides          |
| Forms      | Survey          | Collect responses           |
| Drive      | Storage         | Save files online           |
| Calendar   | Scheduling      | Manage events               |
| Keep       | Notes           | Save reminders              |
| Meet       | Communication   | Online meetings             |
| Classroom  | Education       | Manage teaching online      |
